

Cargo Rail Service Center e.V.
One association
for everybody
in rail freight traffic

Cargo Rail Service Center e.V. is a self-help organisation that has been supporting its members in all matters of rail freight traffic since 2007, and jointly prepares practical solutions for all. More than 80 companies currently benefit from the advantages of being members of CRSC e.V..

- Railway undertakings •
- Car keepers •
- Workshop and maintenance-service providers •
- Manufacturers and suppliers •
- Fillers, shippers and unloaders •
- Other service-providers and suppliers •

Services

CRSC insurance

Industry solution for CRSC members: CRSC offers special additional liability insurance for two areas, which builds on the existing liability insurance coverage of each member company. The goal is to put an "umbrella" over the industry so that the major loss scenario is better covered by a higher coverage amount; the workshop insurance is included in the membership fee. At the same time, CRSC offers access to attractive premiums through the association solution.

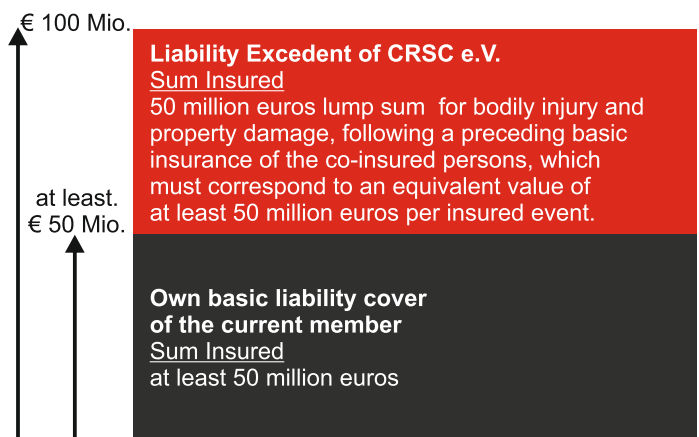

Workshop

CRSC e.V. workshop liability insurance

Insurance coverage up to 50 Mio. EUR coverage sum

Wagon owner

CRSC e.V. wagon owner liability insurance

Insurance coverage up to 100 Mio. EUR sum insured

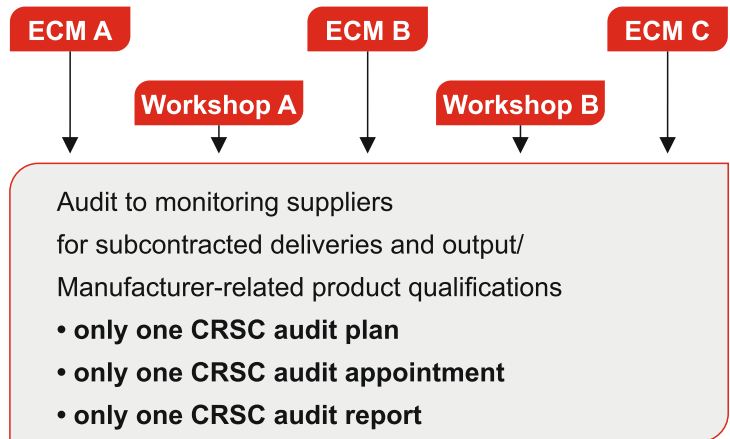

Implementing Regulation (EU) No 2019/779 today obliges car keepers and workshops, within the scope of their responsibility for the maintenance of their freight vehicles, to ensure that their suppliers are competent and have an appropriate maintenance and management system in place that meets the requirements.

Suppliers must be monitored by the organisation responsible for maintenance (ECM) or by the workshop that purchases products from them within the scope of its maintenance-provision function.

This is where Cargo Rail Service Center e.V. creates a "win-win" situation for all parties involved: CRSC members can fulfil these requirements together exclusively while optimising costs and personnel expenditure.

CRSC Supplier Monitoring

CRSC Skills Centre

At the CRSC Skills Centre, experts from the member companies provide answers to, and assistance with, technical and specialist questions related to the sector:

- Changes to the VPI maintenance guidelines
- Requirements of the safety authorities
- Feedback from maintenance
- Information and the requirements of the members
- Information and the requirements from the sector

Each CRSC member can put questions to the Skills Centre. Specialist subjects are dealt with in working groups, also in consultation with external companies/experts where necessary. CRSC members are kept informed of the work of the committees and bodies via newsletters and the homepage, and can use the CRSC workshops and training measures for their internal knowledge management.

Programme extr

- Maintenance Workshop "Wheelset Maintenance"
- ECM DVO 2019/779
- Risk management according to DVO 1078/2012 and 402/2013
- Auditor training
- Brake maintenance UIC 543-1

Workshopfinder Rail Service Hub

Fleet managers (ECM III) are constantly looking for suitable solutions to maintain their locomotives and freight wagons and get them back on the rails quickly. In addition, workshops (ECM IV) with free capacities are looking for new market opportunities to expand their business and to develop and maintain customer relationships.

The "Rail Service Hub" is a new platform that brings fleet managers and workshops closer together, improves communication flows and increases efficiency through digitalised processes.

The "Workshop Finder" - as an essential module of the "Rail Service Hub" - is an application for easily finding locomotive or freight wagon workshops. Various filter criteria make it possible to quickly find the right workshop, e.g. via context data such as location and timetable of the vehicle, plant and vehicle types, services offered or certifications. The search results are clearly presented in an interactive map and in tabular form. In addition, detailed pages for each workshop provide comprehensive information to make your booking decision easier, such as contact persons, contact details, opening hours and service portfolio. Workshops and service providers have the option of managing their information themselves and keeping it up to date at all times.
